PROFESSIONAL PROFILE

.NET Developer with over four years' commercial experience building and maintaining web applications in C# and ASP.NET Core. A thoughtful, conscientious developer focused on producing secure and reliable software, with a track record of developing and delivering features end-to-end, resolving production issues under SLA, and working across multiple CMS platforms. Now seeking a mid-level .NET Developer role with ownership of complex features and input into technical decisions.

EXPERIENCE

Mediamaker – .NET Developer

June 2024 – Present

- Built a pharmacy data importer on Umbraco 15, replacing a manual process and letting the client import thousands of records at once, automatically organised by website language and inserted into the correct Umbraco backoffice folders. Built as a Lit web component plugin secured with a ManagementApiControllerBase and OAuth bearer token auth. Delivered end to end from requirements through development and testing to production release.
- Built a daily automated backup solution as a timer-triggered Azure Function, exporting the production SQL Server database and a Cosmos DB container holding thousands of proposal form records via the Azure Management API with bearer token authentication, then zipping, encrypting, and delivering them over SFTP. Authored client-facing documentation covering the architecture, setup, configuration, and operational flow of the process.
- Designed an atomic SFTP upload process by writing to a temporary filename and renaming it only after successful completion, with cleanup logic on failure to prevent partial or corrupted backup files reaching the destination.
- Wrote unit tests with xUnit and Moq covering CRUD operations and core service logic.
- Worked within a GitHub Actions CI/CD pipeline, promoting changes through SIT, UAT, and production, with automated builds and unit test runs on merge and a code review checkpoint before release.
- Collaborated with front-end developers on implementation approaches, handed work to QA and supported testing, and kept project managers updated on progress and timelines.
- Worked across multiple concurrent client projects, owning IIS deployments and resolving configuration and environment errors before release, and diagnosing production issues including middleware redirect loops.

Mediamaker – Support Lead

December 2023 – June 2024

- Set up and configured FreshDesk as the company's support desk, integrated it with Jira, and administered Jira across client projects - defining SLA policies, project structure, filters, and custom fields so tickets could be tracked per client.
- Managed incoming support tickets across client projects, triaging and assigning work to developers to meet SLA targets, coordinating urgent incidents, and acting as the main client contact for issue progress and escalation.
- Participated in sprint planning, estimated effort, and tracked feature delivery across multiple projects.
- Diagnosed production and UAT issues using Azure Application Insights (logs and traces) and IIS logs, and debugged API flows with Postman.
- Performed SQL database updates and data fixes, and made code changes to ASP.NET Core services to resolve customer issues.
- Delivered monthly reports on application performance and usage to support business decision making.

DEPT - Junior .NET Developer

June 2022 - November 2023

- Developed and implemented new features based on client requirements across multiple CMS platforms, including Tridion, Sitecore, Optimizely, and Umbraco.
- Reviewed, tested, and debugged code to ensure quality, resolving issues using Azure DevOps, Bitbucket, AWS logs, and Postman.
- Deployed solutions across multiple environments using Azure DevOps, TeamCity, Octopus Deploy, and Optimizely PaaS Portal.

SKILLS

Languages: C#, SQL

Frameworks & Technologies: ASP.NET Core (.NET 9/10), ASP.NET MVC, Entity Framework Core, RESTful APIs

CMS Platforms: Umbraco, Sitecore, Optimizely

Cloud & Databases: Azure (App Services, Functions, Cosmos DB, Blob Storage, Application Insights), SQL Server

Tools & Methodologies: Git/Gitflow, GitHub Actions, Docker, GitHub Copilot, Agile development

Testing: xUnit, Moq

TRAINING/COURSES

- Sitecore .NET Developer 10 Certification Exam
- .NET Core MVC - The Complete Guide [E-commerce][MVC]
